

New Cross Kit

New Cross Kit

- the best for your agricultural machine

Innovations for greater efficiency

The latest cross kit concept combines the longstanding experience and proven technical expertise of Walterscheid.

Due to the new bearing design, improved sealing and an increased lubricant capacity, the new cross kit achieves:

- > Longer operating life
- > Extended service interval
- > Reduced rate of wear
- > Lower risk of contamination
- > Minimised grease loss

The operating life has been increased by up to twice as long as previous generations of cross kit. This increase in reliability reduces the workload on the farmer resulting in greater operating efficiency.

Innovations for greater efficiency

Increasing power and operating time (through longer life and reduced downtime) are clearly growing trends for agricultural machinery and equipment.

With the rising complexity of agricultural machinery up to the professional level of equipment, there is a particularly important expectation from the operator:

“For the increasingly more powerful and longer life machinery, the service and maintenance requirements must also be simultaneously reduced and simplified”
